

Software Engineering student at Bahir Dar University and Full-Stack MERN Developer focused on building high-performance React applications and reliable Node.js backends. Experienced in clean architecture, and test-driven development with 390+ passing Vitest assertions, while optimizing applications to achieve 99/100 Mobile and desktop performance metrics. ALX Software Engineering graduate passionate about building scalable and user-focused software solutions.

EXPERIENCE

MERN Stack Developer (Independent Engineering Projects) 2026 – Present

Remote

- Engineered production-ready frontend architectures with React, Vite, and Tailwind CSS along with modular Node.js/Express REST APIs.
- Built out rigorous test execution streams using Vitest, React Testing Library, and Supertest to validate 390+ frontend and backend assertions.
- Optimized client asset performance through bundle-splitting, lazy route loading, and image compression to lock in 99+ Lighthouse metrics.
- Implemented secure authentication pipelines featuring stateless JWTs, salted bcrypt password hashing, and Cloudinary media stores.

Frontend Engineer (Cursor Hackathon – Nuur Safety Platform) 2026

Remote

- Co-authored and delivered a functional urban safety MVP under highly competitive, time-constrained hackathon constraints.
- Architected responsive UI components using React and TypeScript to handle core high-priority emergency reporting and user location workflows.
- Collaborated across a cross-functional development cycle to map and link frontend UI elements cleanly with a FastAPI and PostgreSQL backend.

FEATURED PROJECTS

Aman Blog & Portfolio Ecosystem Live Demo GitHub

React • Node.js • Express.js • MongoDB • JWT • Vitest • Supertest • Tailwind CSS

Architected a secure full-stack publishing ecosystem validated by a suite of 51 test files and 398 passed assertions (Frontend: 37 files / 255 tests passed via Vitest/RTL; Backend: 14 files / 143 tests passed via Supertest). Integrates stateless authorization, administrative dashboards, custom rich text managers, and automated Cloudinary uploads.

Nuur Safety Platform Live Demo GitHub

React • TypeScript • Tailwind CSS • FastAPI • PostgreSQL

A collaborative urban safety hub designed for immediate incident mapping, emergency notifications, and asset tracking. Developed responsive map layouts, reporting modules, and user workflows optimized for mobile performance under high load.

Developer Portfolio V2 Live Demo GitHub

React • Vite • Tailwind CSS • Vitest • EmailJS

A highly streamlined developer portfolio utilizing aggressive code optimization to boost original baseline Lighthouse metrics from 78 to an exceptional 99 on mobile viewports and a flawless 100 on desktop. Includes a fully isolated Vitest suite validating client communication forms.

Scalable E-Commerce Engine Live Demo GitHub

React • Zustand • Vite • Tailwind CSS • Vitest • Firebase

A decoupled, light-footprint retail frontend utilizing Zustand for lightweight state management without boilerplate overhead. Implemented modular multi-variable filtering, responsive cart arrays, and live Firebase-handled authentication workflows.

EDUCATION

Bachelor of Science in Software Engineering 2025 – 2029

Bahir Dar University

© Bahir Dar, Ethiopia

TECHNICAL SKILLS

Frontend

React, JavaScript (ES6+), Tailwind CSS, Zustand, Context API, React Router, Vite, Framer Motion, HTML5 / CSS3

Backend

Node.js, Express.js, MongoDB, Mongoose, REST APIs, JWT Authentication, bcrypt, Cloudinary

Testing

Vitest, React Testing Library (RTL), Supertest, Unit Testing, Integration Testing

Tools

Git / GitHub, GitHub Projects (Agile), Postman, Figma, MongoDB Atlas, Vercel, Render, Lighthouse Auditing

ACHIEVEMENTS

- Built and maintained full-stack automated test beds passing 398 assertions across 51 separate test files using Vitest and Supertest.
- Maximized web vitals across client projects, earning a perfect 100 desktop and 99 mobile performance score on Lighthouse audits.
- Maintained an active engineering cadence with over 999+ authenticated GitHub contributions across 30+ public repositories.
- Successfully co-authored and shipped an integrated cross-platform MVP under high-pressure Cursor Hackathon timelines.
- Graduated from the rigorous ALX Software Engineering Program, anchoring practical skills with deep systems knowledge.

CERTIFICATIONS

- ALX Software Engineering Program
- ALX Professional Foundations
- Ethiocoder (Udacity / UAE Sponsored)
- Cursor Hackathon Recognition

LANGUAGES

- English — Professional Working Proficiency
- Amharic — Native
